

RECORD REQUEST OF
THE ATTORNEY GENERAL
TO KEYSpan ENERGY DELIVERY NEW ENGLAND

D.T.E. 05-68

Dated: April 6, 2006

Respondent: Theodore Poe, Jr.

Record Request AG-7

- Q. Please provide a chart similar to Chart IV-D-3 for a design winter and explain any assumptions made to develop the Chart.
- A. Please see the attached Chart. Also, please note that the analysis makes the assumption that the Tennessee ConneXion capacity (112,000 MMBtu/day) will be on-line beginning with the 2007-08 winter season, along with a companion contract for capacity on the Algonquin pipeline delivering to the Cape Cod system. Specifically, the Tennessee ConneXion capacity will deliver to the southernmost delivery point on the Tennessee pipeline in Mendon, Massachusetts, which is the point of interconnection with the Algonquin pipeline serving the Cape. Therefore, the Company anticipates that it will enter into a long-term contract with Algonquin for transportation capacity on its existing G Lateral system serving southeastern Massachusetts to deliver incremental volumes from Mendon, MA to the Cape. Thus, the Company's design-season analysis assumes that this capacity will be available to the Cape Cod service area after the 2007-08 heating season.
